

Enquiry Knowledge Organiser Year 2 - What is Home?

Vocabulary I need to know to be a geographer:

Compass - this shows directions:

North
East
South
West

Equator - a line dividing the earth into the northern hemisphere and southern hemisphere

What Is a Map?

A map is a drawing of an actual place that uses lines and symbols to represent real-life objects.

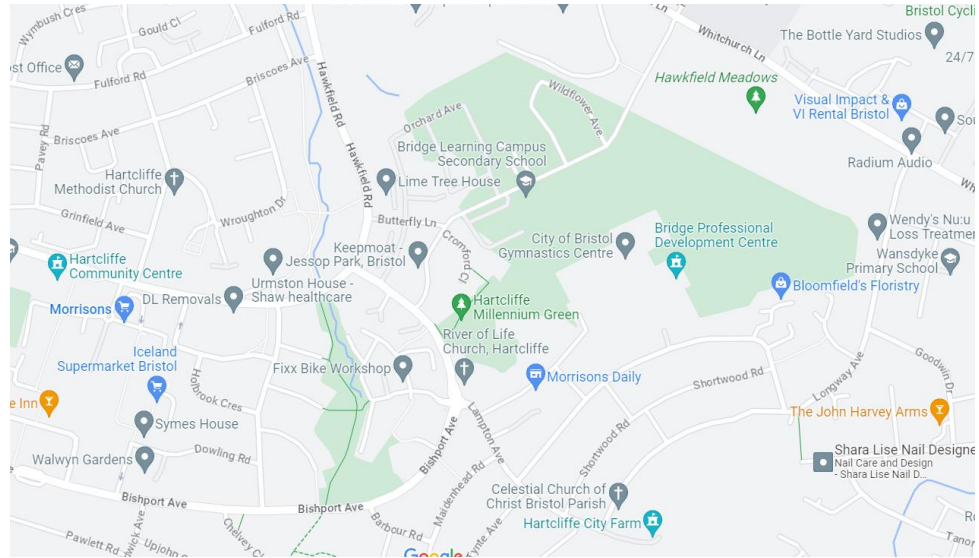

People have used maps for hundreds of years to help them travel from place to place.

Types of Maps

There are many different types of maps, such as: Sketch maps, Road maps, Ordnance Survey maps and Climate maps.

Our school is in Hartcliffe. What else can you see on the map?

Which animals might live there?

Scientist

Plants and animals produce offspring that grow into adults.

Living things move, grow, consume nutrients and reproduce.

Dead things used to do these things, but no longer do.

Animals and plants are suited to the habitat they live in. These could be savannah, desert, rainforest, polar.

Under stones and rocks

In short grass

Under fallen leaves.

In and on the soil.

A microhabitat is a small area with unique conditions where different plants and animal live.

What knowledge do I already have?

- I can tell you what 'locality' means.
- I can explain what the word habitat is.
- I can compare every day materials such as wood, material, plastic, glass, brick, rock, paper and cardboard.
- I can talk through changing materials by squashing, bending, twisting and stretching.
- I know how to cut things with scissors and knives and how to fix things with tape, stapler and glue.

Artist

Megan Coyle is an artist who uses collage to create landscapes. She tears and cuts coloured paper and paper from magazines to make images. We will also use the clay skills of moulding, rolling and pinching to create sculptures.
